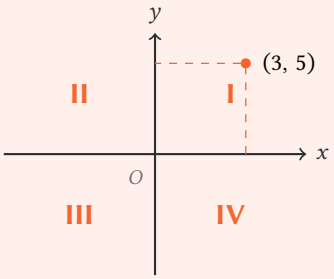
FORMULA SHEET

QOIDA · Koordinatalar tekisligi



Chorak	x	y
I	+	+
II	−	+
III	−	−
IV	+	−

QOIDA · $y = kx + b$

$k = -3$ **(qiyalik/slope)**

$$y = -3x + 5$$

$b = 5$ **(Oy-kesma)**

SAT'da k o'rniga m harfi va "slope" so'zi ishlatiladi: $y = mx + b$. $k = m$ – faqat nom boshqa.

QOIDA · $f(x)$ yozuvi

$f(x)$ – bu shunchaki y ning boshqa nomi. x o'rniga son qo'yib, ifodani hisoblang:

$$f(x) = 2x + 3$$
$$\downarrow$$
$$f(4) = 2(4) + 3$$
$$\downarrow$$
$$= 8 + 3$$
$$\downarrow$$
$$f(4) = 11$$

$$f(x) = x^2 - 2x$$

← manfiy son qavs ichida!

$$f(-3) = \underline{(-3)}^2 - 2\underline{(-3)}$$
$$= 9 + 6 = 15$$
