FORMULA SHEET

QOIDA · Surat, maxraj, soddalashtirish

surat → $\frac{24}{36}$ ← maxraj

$\xrightarrow{\div 12}$ $\frac{2}{3}$

eng oddiy ko'rinish

QOIDA · Qo'shish / ayirish

Maxrajlar har xil bo'lsa, avval umumiy maxrajga keltiring – faqat shundan keyin suratlarni qo'shing yoki ayiring:

$\frac{1}{4} + \frac{1}{6}$ ← 1. EKUK(4,6)=12

↓

$\frac{3}{12} + \frac{2}{12}$ ← 2. suratlarni qo'shing

↓

$= \frac{5}{12}$

QOIDA · Ko'paytirish

$$\frac{4}{9} \times \frac{3}{8}$$

qisqartiring: 4&8 → ÷4, 3&9 → ÷3

$$= \frac{1}{3} \times \frac{1}{2} = \frac{1}{6}$$

QOIDA · Bo'lish

$$\frac{3}{4} \div \frac{2}{5}$$

teskarisiga ko'paytiring (K-C-F)

$$= \frac{3}{4} \times \frac{5}{2} = \frac{15}{8}$$

QOIDA · Aralash son ↔ noto'g'ri kasr

$3\frac{2}{5}$ $\xrightarrow{3\times5+2}$ $\frac{17}{5}$ $\qquad$ $\frac{23}{6}$ $\xrightarrow{23\div6}$ $3\frac{5}{6}$

Butun son maxrajga ko'paytiriladi, suratga qo'shiladi – maxraj o'zgarmaydi. Teskarisida: suratni maxrajga bo'ling, bo'linma – butun son, qoldiq – yangi surat.
