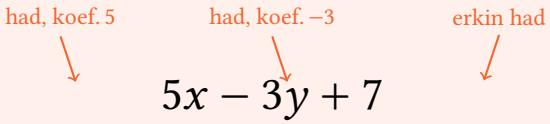
FORMULA SHEET

QOIDA · Had, koeffitsient, o'xshash hadlar



$4x + 3y - x + 7$ → (x hadlarni qo'shing) → $3x + 3y + 7$

QOIDA · Taqsimot xossasi

$$a(b + c) = ab + ac$$

$3(2x - 5) = 6x - 15$

Manfiy ishora qavsdagi **har bir** hadga tatbiq etiladi:

$-(3x - 5) \neq -3x - 5$ $\qquad -(3x - 5) = -3x + 5$

QOIDA · Ko'p hadli ifodani soddalashtirish

$4(x + 3) - 2(x - 1)$ ← 1. qavslarni oching

↓

$4x + 12 - 2x + 2$ ← 2. o'xshash hadlarni qo'shing

↓

$= 2x + 14$

Har bir qavs taqsimot xossasi bilan alohida ochiladi (manfiy ishoraga e'tibor bering), keyin o'xshash hadlar ixchamlanadi.
